

## **Scenario:**

You are a creative person who enjoys customizing each and every one of your possessions when possible. You are also a selective shopper, making sure that every purchase you make is both practical and functional to your standards. Because of this, purchasing a mask for the COVID-19 pandemic has proved somewhat difficult for you, as you struggle to find a face covering that meets these requirements.

Task 1: Create a mask with your own custom logo, color, material, and type.

Task 2: Browse through the popular mask section to see if there are any already there that meet your standards.

Task 3: Purchase either one of these products.

## **Notes:**

Necessary Improvements:

- Add a section for leaving reviews, as selective shoppers like these will be using the app
- Add more generic logos and colors, as the present options are somewhat limited
- Add a shopping cart screen rather than going straight to checkout

App Positives:

- Buttons optimized reasonably well; back buttons, check boxes, and drop-down bars all work
- Even with limited selection, there are still numerous possible customization options
- Logging in with Amazon proved handy with easy checkout
